API Parameters

Search Query

product_id

Required

Parameter defines an ID of the product to get results for. Normally, it can be found in product link from search results:
https://www.ebay.com/itm/{product_id}

Localization

ebay_domain

Optional

Parameter defines the eBay domain to use. It defaults to [ebay.com](#). Head to the [eBay domains](#) for a full list of supported domains.

locale

Optional

Parameter defines from where you want the search to originate from. Head to the [eBay locales](#) for a full list of supported locales.

/

This parameter available only for **United States** eBay domain and only when `locale` is set.

e Advanced Ebay Parameters

 shipping_country	Optional	Parameter defines the shipping country to use for shipping data calculation. Head to the eBay shipping countries for a full list of supported countries.
-----------------------------------	----------	--

Serpapi Parameters

 engine	Required	Set parameter to <code>ebay_product</code> to use the Ebay Product API engine.
 no_cache	Optional	Parameter will force SerpApi to fetch the Ebay Product results even if a cached version is already present. A cache is served only if the query and all parameters are exactly the same. Cache expires after 1h. Cached searches are free, and are not counted towards your searches per month. It can be set to <code>false</code> (default) to allow results from the cache, or <code>true</code> to disallow results from the cache. <code>no_cache</code> and <code>async</code> parameters should not be used together.
 async	Optional	Parameter defines the way you want to submit your search to SerpApi. It can be set to <code>false</code> (default) to open an HTTP connection and keep it open until you get your search results, or <code>true</code> to just submit your search to SerpApi and retrieve them later. In this case, you'll need to use our Searches Archive API to retrieve your results. <code>async</code> and <code>no_cache</code> parameters should not be used together. <code>async</code> should not be used on accounts with Ludicrous Speed enabled.
 zero_trace	Optional	Enterprise only. Parameter enables ZeroTrace mode . It can be set to <code>false</code> (default) or <code>true</code> . Enable this mode to skip storing search parameters, search files, and search metadata on our servers. This may make debugging more difficult.
 api_key	Required	Parameter defines the SerpApi private key to use.
 output	Optional	Parameter defines the final output you want. It can be set to <code>json</code> (default) to get a structured JSON of the results, or <code>html</code> to get the raw html retrieved.
 json_restrictor	Optional	Parameter defines the fields you want to restrict in the outputs for smaller, faster responses. See JSON Restrictor for more details.

API Results**JSON Results**

JSON output includes structured data for the product.
A search status is accessible through `search_metadata.status`. It flows this way: `Processing` -> `Success` || `Error`. If a search has failed, `error` will contain an error message. `search_metadata.id` is the search ID inside SerpApi.

HTML Results

HTML output is useful to debug JSON results or support features not supported yet by SerpApi.
HTML output gives you the raw HTML results from eBay Product.
