/

Google Images API

API uptime 99.694%

Our Google Images API allows you to scrape results from the Google Images page. The API is accessed through the following endpoint: /search?engine=google_images. A user may query the following: https://serpapi.com/search?engine=google_images utilizing a GET request. Head to the [playground](#) for a live and interactive demo.

If you are interested in the reverse image search - head to our [Reverse Image API](#).

API Parameters

Search Query

Required

Parameter defines the query you want to search. You can use anything that you would use in a regular Google Images search. e.g. `inurl:`, `site:`, `intitle:`.

Geographic Location

Optional

Parameter defines from where you want the search to originate. If several locations match the location requested, we'll pick the most popular one. Head to the [/locations.json API](#) if you need more precise control. The `location` and `uule` parameters can't be used together. It is recommended to specify `location` at the city level in order to simulate a real user's search. If `location` is omitted, the search may take on the location of the proxy.

Optional

Parameter is the Google encoded location you want to use for the search.

`uule` and `location` parameters can't be used together.

Localization

Optional

Parameter defines the Google domain to use. It defaults to `google.com`. Head to the [Google domains](#) for a full list of supported Google domains.

Optional

Parameter defines the country to use for the Google Images search. It's a two-letter country code. (e.g., `us` for the United States, `uk` for United Kingdom, or `fr` for France) Head to the [Google countries](#) for a full list of supported Google countries.

Optional

Parameter defines the language to use for the Google Images search. It's a two-letter language code. (e.g., `en` for English, `es` for Spanish, or `fr` for French) Head to the [Google languages](#) for a full list of supported Google languages.

Optional

Parameter defines one or multiple countries to limit the search to. It uses `country{two-letter upper-case country code}` to specify countries and `|` as a delimiter. (e.g., `countryFR|countryDE` will only search French and German pages). Head to the [Google cr countries page](#) for a full list of supported countries.

Time Period

Optional

Parameter defines the time period unit to search for the recent images, e.g. from past minute, hour, day etc.

Options:

- `s` - Second
- `n` - Minute
- `h` - Hour
- `d` - Day
- `w` - Week
- `m` - Month
- `y` - Year

This parameter can't be used with `start_date` / `end_date` parameters.

This parameter overrides `qdr` component of `tbs` parameter.

Optional

Parameter defines an optional time period value that can be used with `period_unit` to describe time periods like `15 seconds`, `42 hours`, `178 days` etc.

Default value: `1`

Value range: `1..2147483647`

Optional

Parameter defines the start date of time period you want to limit the image search to.

Format: `YYYYMMDD`

Example: `20241201`

This parameter can't be used with `period_unit` / `period_value` parameters.

`start_date` with blank `end_date` produces date range `FROM start_date TO today`.

This parameter overrides `cdr` and `cd_min` components of `tbs` parameter.

- [Yahoo! Search API](#)
- [Yandex Search API](#)
- [Yelp Search API](#)
- [YouTube Search API](#)
- [Extra APIs](#)
- [Status and Error Codes](#)

Format: YYYYMMDD

Example: 20241231

- This parameter can't be used with `period_unit` / `period_value` parameters.
- `end_date` with blank `start_date` produces date range BEFORE `end_date`.
- This parameter overrides `cdr` and `cd_max` components of `tbs` parameter.

Advanced Filters

 chips	Optional	Parameter enables to filter image search. It's a string provided by Google as suggested search, like: red apple. Chips are provided under the section: <code>suggested_searches</code> when <code>ijn = 0</code> . Both <code>chips</code> and <code>serpapi_link</code> values are provided for each suggested search.
 tbs	Optional	(to be searched) parameter defines advanced search parameters that aren't possible in the regular query field.
 imgar	Optional	Parameter defines the set aspect ratio of images. Options: <code>s</code> - Square <code>t</code> - Tall <code>w</code> - Wide <code>xw</code> - Panoramic
 imgsz	Optional	Parameter defines the size of images. Options: <code>l</code> - Large <code>m</code> - Medium <code>i</code> - Icon <code>qsvga</code> - Larger than 400x300 <code>vga</code> - Larger than 640x480 <code>svga</code> - Larger than 800x600 <code>xga</code> - Larger than 1024x768 <code>2mp</code> - Larger than 2 MP <code>4mp</code> - Larger than 4 MP <code>6mp</code> - Larger than 6 MP <code>8mp</code> - Larger than 8 MP <code>10mp</code> - Larger than 10 MP <code>12mp</code> - Larger than 12 MP <code>15mp</code> - Larger than 15 MP <code>20mp</code> - Larger than 20 MP <code>40mp</code> - Larger than 40 MP <code>70mp</code> - Larger than 70 MP
 image_color	Optional	Parameter defines the color of images. Options: <code>bw</code> - Black and white <code>trans</code> - Transparent <code>red</code> - Red <code>orange</code> - Orange <code>yellow</code> - Yellow <code>green</code> - Green <code>teal</code> - Teal <code>blue</code> - Blue <code>purple</code> - Purple <code>pink</code> - Pink <code>white</code> - White <code>gray</code> - Gray <code>black</code> - Black <code>brown</code> - Brown
		This parameter overrides <code>ic</code> and <code>isc</code> components of <code>tbs</code> parameter
 image_type	Optional	Parameter defines the type of images. Options: <code>face</code> - Face <code>photo</code> - Photo <code>clipart</code> - Clip art <code>lineart</code> - Line drawing <code>animated</code> - Animated
		This parameter overrides <code>itp</code> component of <code>tbs</code> parameter
 licenses	Optional	Parameter defines the scope of licenses of images. Options: <code>f</code> - Free to use or share <code>fc</code> - Free to use or share, even commercially <code>fm</code> - Free to use, share or modify <code>fmc</code> - Free to use, share or modify, even commercially <code>cl</code> - Creative Commons licenses <code>ol</code> - Commercial and other licenses
		This parameter overrides <code>sur</code> component of <code>tbs</code> parameter
 safe	Optional	Parameter defines the level of filtering for adult content. It can be set to <code>active</code> or <code>off</code> , by default Google will blur explicit content.
 nfpr	Optional	Parameter defines the exclusion of results from an auto-corrected query when the original query is spelled wrong. It can be set to <code>1</code> to exclude these results, or <code>0</code> to include them (default). Note that this parameter may not prevent Google from returning results for an auto-corrected query if no other results are available.

/

Pagination

ijn

Optional

Parameter defines the page number for Google Images. There are 100 images per page. This parameter is equivalent to `start` (offset) = `ijn` * 100.

Serpapi Parameters

engine

Required

Set parameter to `google_images` to use the Google Images API engine.

device

Optional

Parameter defines the device to use to get the results. It can be set to `desktop` (default) to use a regular browser, `tablet` to use a tablet browser (currently using iPads), or `mobile` to use a mobile browser.

no_cache

Optional

Parameter will force SerpApi to fetch the Google Images results even if a cached version is already present. A cache is served only if the query and all parameters are exactly the same. Cache expires after 1h. Cached searches are free, and are not counted towards your searches per month. It can be set to `false` (default) to allow results from the cache, or `true` to disallow results from the cache. `no_cache` and `async` parameters should not be used together.

async

Optional

Parameter defines the way you want to submit your search to SerpApi. It can be set to `false` (default) to open an HTTP connection and keep it open until you got your search results, or `true` to just submit your search to SerpApi and retrieve them later. In this case, you'll need to use our [Searches Archive API](#) to retrieve your results. `async` and `no_cache` parameters should not be used together. `async` should not be used on accounts with [Ludicrous Speed](#) enabled.

zero_trace

Optional

Enterprise only. Parameter enables [ZeroTrace mode](#). It can be set to `false` (default) or `true`. Enable this mode to skip storing search parameters, search files, and search metadata on our servers. This may make debugging more difficult.

api_key

Required

Parameter defines the SerpApi private key to use.

output

Optional

Parameter defines the final output you want. It can be set to `json` (default) to get a structured [JSON](#) of the results, or `html` to get the raw html retrieved.

json_restricotr

Optional

Parameter defines the fields you want to restrict in the outputs for smaller, faster responses. See [JSON Restrictor](#) for more details.

API Results

JSON Results

JSON output includes structured data for [Suggested Searches](#), [Images Results](#), [Shopping Results](#) and [Related Searches](#).

A search status is accessible through `search_metadata.status`. It flows this way: `Processing` → `Success` || `Error`. If a search has failed, `error` will contain an error message. `search_metadata.id` is the search ID inside SerpApi.

HTML Results

HTML output is useful to debug JSON results or support features not supported yet by SerpApi. HTML output gives you the raw HTML results from Google.

API Examples

Results for: [Coffee](#)

The screenshot shows the Google Images search results for the query "coffee". The results include various images of coffee cups, beans, and related products. A red box highlights the top three images: a latte art cup, a black coffee cup, and a cup of coffee with beans. Below the images are several image cards with titles like "Wikipedia Coffee - Wikipedia", "Tasting Table 31 Coffee Brands, Ranked From Worst To Best", and "CNN Is coffee healthy? | CNN".

GET

```
1 | https://serpapi.com/search.json?
  engine=google_images&q=Coffee&location=Austin,+TX,+Texas,+United+States
```

Code to integrate

```
1 | require "serpapi"
2 |
3 | client = SerpApi::Client.new(
4 |   engine: "google_images",
5 |   q: "Coffee",
6 |   location: "Austin, TX, Texas, United States",
7 |   api_key:
8 | "a85853e3401522bd0dbb7b0d6b4901dc8a5849baae4354be6cea1dd229296958"
9 |
10 | results = client.search
```

```

Results for: **diagram filetype:pdf**

Images from PDF documents may be presented as references to the internal XObject structures. Such references start with `x-raw-image://` and are stored in the `original` field.

🔗 GET

```
1 | https://serpapi.com/search.json?
  engine=google_images&q=diagram+filetype:pdf&hl=en&gl=us
```

🔗 Code to integrate

```

1 | require "serpapi"
2 |
3 | client = SerpApi::Client.new(
4 |   engine: "google_images",
5 |   q: "diagram filetype:pdf",
6 |   hl: "en",
7 |   gl: "us",
8 |   api_key:
9 | "a85853e3401522bd0dbb7b0d6b4901dc8a5849baae4354be6cea1dd229296958"
10 |
11 | results = client.search

```
