## Bing Search Engine Results API

API uptime 97.603%

`/search?engine=bing` API endpoint allows you to scrape the results from the Bing search engine via our SerpApi service. Head to the [playground](#) for a live and interactive demo.

The screenshot shows the Microsoft Bing search results for the query "Coffee" in the United States. The results include a grid of coffee products like McCafe Premium, Green Mountain Breakfast Blend, Folgers Classic Roast, Maxwell House Original Roast, and Folgers Canister. Below the grid, there are sections for "Coffees | Fresh-Roasted Gourmet Coffees" and "Top shopping results for Coffee". The sidebar on the right displays the search metadata and parameters in JSON format.

### API Parameters

Search Query

Required

Parameter defines the search query. You can use anything that you would use in a regular Bing search. (e.g., `'query'`, `NOT`, `OR`, `site:`, `filetype:`, `near:`, `ip:`, `loc:`, `feed:` etc.).

Geographic Location

location

Optional

Parameter defines from where you want the search to originate. If several locations match the location requested, we'll pick the most popular one. Head to the `/locations.json` API if you need more precise control. The `location` and `uule` parameters can't be used together. It is recommended to specify `location` at the city level in order to simulate a real user's search. If `location` is omitted, the search may take on the location of the proxy.

lat

Optional

Defines a GPS latitude for the search origin

lon

Optional

Defines a GPS longitude for the search origin

Status and Error Codes

/
The market must be in the form <language code>-<country code>. For example, en-US. The string is case insensitive. For a list of possible market values, see <a href="#">Market Codes</a> .
NOTE: If known, you are encouraged to always specify the market. Specifying the market helps Bing route the request and return an appropriate and optimal response. If you specify a market that is not listed in <a href="#">Market Codes</a> , Bing uses a best fit market code based on an internal mapping that is subject to change.
This parameter and the cc query parameter are mutually exclusive—do not specify both.
<h3>Localization</h3>
cc Optional Parameter defines the country to search from. It follows the 2-character ISO_3166-1 format. (e.g., us for United States, de for Germany, gb for United Kingdom, etc.).
<h3>Pagination</h3>
first Optional Parameter controls the offset of the organic results. This parameter defaults to 1 . (e.g., first=10 will move the 10th organic result to the first position).
count Optional Parameter controls the number of results per page. Minimum: 1 , Maximum: 50 . This parameter is only a suggestion and might not reflect actual results returned.
<h3>Advanced Filters</h3>
safeSearch Optional Parameter defines the level of filtering for adult content. It can be set to:  <b>Off</b> to return webpages with adult text, images, or videos. <b>Moderate</b> to return webpages with adult text, but not adult images or videos. <b>Strict</b> to not return webpages with adult text, images, or videos.
filters Optional Parameter allows usage of a more complex filtering options such as filtering by date range ex1:"ez5_18169_18230" or using a specific display filters such as ufn:"Wunderman+Thompson"+sid:"5bede9a2-1bda-9887-e6eb-30b1b8b6b513"+catguid:"5bede9a2-1bda-9887-e6eb-30b1b8b6b513_cfb02057"+segment:"generic.carousel"+entitysegment :"Organization" . Exact values can be constructed by using Bing search and copying filters query parameter.
<h3>Serpapi Parameters</h3>
engine Required Set parameter to bing to use the Bing API engine.
device Optional Parameter defines the device to use to get the results. It can be set to desktop (default) to use a regular browser, tablet to use a tablet browser (currently using iPads), or mobile to use a mobile browser.
no_cache Optional Parameter will force SerpApi to fetch the Bing results even if a cached version is already present. A cache is served only if the query and all parameters are exactly the same. Cache expires after 1h. Cached searches are free, and are not counted towards your searches per month. It can be set to false (default) to allow results from the cache, or true to disallow results from the cache. no_cache and async parameters should not be used together.
async Optional Parameter defines the way you want to submit your search to SerpApi. It can be set to false (default) to open an HTTP connection and keep it open until you got your search results, or true to just submit your search to SerpApi and retrieve them later. In this case, you'll need to use our <a href="#">Searches Archive API</a> to retrieve your results. async and no_cache parameters should not be used together. async should not be used on accounts with <a href="#">Ludicrous Speed</a> enabled.
zero_trace Optional Enterprise only. Parameter enables ZeroTrace mode. It can be set to false (default) or true . Enable this mode to skip storing search parameters, search files, and search metadata on our servers. This may make debugging more difficult.
api_key Required Parameter defines the SerpApi private key to use.
output Optional Parameter defines the final output you want. It can be set to json (default) to get a structured JSON of the results, or html to get the raw html retrieved.
json_restrictror Optional Parameter defines the fields you want to restrict in the outputs for smaller, faster responses. See <a href="#">JSON Restrictor</a> for more details.
<h3>API Results</h3>
<h4>JSON Results</h4>
JSON output includes structured data for <a href="#">organic results</a> , <a href="#">ad results</a> , and more.
A search status is accessible through <code>search_metadata.status</code> . It flows this way: <code>Processing -&gt; Success    Error</code> . If a search has failed, <code>error</code> will contain an error message. <code>search_metadata.id</code> is the search ID inside SerpApi.

HTML output is useful to debug JSON results or support features not supported yet by SerpApi.  
HTML output gives you the raw HTML results from Bing.

## API Examples

### Example results for Coffee

›/ GET

1 | <https://serpapi.com/search.json?engine=bing&q=Coffee>

Ruby

›/ Code to integrate

```
1 | require "serpapi"
2 |
3 | client = SerpApi::Client.new(
4 |   engine: "bing",
5 |   q: "Coffee",
6 |   api_key:
7 | "a85853e3401522bd0dbb7b0d6b4901dc8a5849baae4354be6cea1dd229296958"
8 | )
9 |
10 | results = client.search
|   organic_results = results[:organic_results]
```
