# DuckDuckGo Search Engine Results API

API uptime 98.276%

Our DuckDuckGo API allows you to scrape SERP results from DuckDuckGo. The API is accessed through the following endpoint: </search?engine=duckduckgo>.

A user may query the following: <https://serpapi.com/search?engine=duckduckgo> utilizing a GET request. Head to the [playground](#) for a live and interactive demo.

/

<a href="#"> safe</a>	Optional	Parameter defines the level of filtering for adult content. It can be set to <b>1</b> (Strict), <b>-1</b> (Moderate - default), or <b>-2</b> (Off).
<a href="#"> df</a>	Optional	Parameter defines results filtered by date.  It can be set to: <b>d</b> : Past day, <b>w</b> : Past week, <b>m</b> : Past month, <b>y</b> : Past year,  or you can pass a custom date following the next format: <b>from_date + ... + to_date</b> (e.g. <b>2021-06-15..2024-06-16</b> ).

## Pagination

<a href="#"> start</a>	Optional	Parameter defines the result offset. It skips the given number of results.  When offset is not being used (initial search request, <b>start</b> parameter is set to 0 or left blank), up to 35 <b>organic_results</b> can be returned.  When offset is being used ( <b>start</b> parameter is greater than 0), up to 50 <b>organic_results</b> can be returned.
<a href="#"> m</a>	Optional	Parameter defines the maximum number of results to return.  Default value: <b>50</b> Min. value: <b>1</b> Max. value: <b>50</b>  When offset is not being used (initial search request, <b>start</b> parameter is set to 0 or left blank), up to 35 <b>organic_results</b> can be returned.  DuckDuckGo may return duplicated results or a variable number of results. This is more likely to happen with higher <b>start</b> and <b>m</b> parameters.

## Serpapi Parameters

<a href="#"> engine</a>	Required	Set parameter to <b>duckduckgo</b> to use the DuckDuckGo API engine.
<a href="#"> no_cache</a>	Optional	Parameter will force SerpApi to fetch the DuckDuckGo results even if a cached version is already present. A cache is served only if the query and all parameters are exactly the same. Cache expires after 1h. Cached searches are free, and are not counted towards your searches per month. It can be set to <b>false</b> (default) to allow results from the cache, or <b>true</b> to disallow results from the cache. <b>no_cache</b> and <b>async</b> parameters should not be used together.
<a href="#"> async</a>	Optional	Parameter defines the way you want to submit your search to SerpApi. It can be set to <b>false</b> (default) to open an HTTP connection and keep it open until you got your search results, or <b>true</b> to just submit your search to SerpApi and retrieve them later. In this case, you'll need to use our <a href="#">Searches Archive API</a> to retrieve your results. <b>async</b> and <b>no_cache</b> parameters should not be used together. <b>async</b> should not be used on accounts with <a href="#">Ludicrous Speed</a> enabled.
<a href="#"> zero_trace</a>	Optional	Enterprise only. Parameter enables <a href="#">ZeroTrace mode</a> . It can be set to <b>false</b> (default) or <b>true</b> . Enable this mode to skip storing search parameters, search files, and search metadata on our servers. This may make debugging more difficult.
<a href="#"> api_key</a>	Required	Parameter defines the SerpApi private key to use.
<a href="#"> output</a>	Optional	Parameter defines the final output you want. It can be set to <b>json</b> (default) to get a structured <b>JSON</b> of the results, or <b>html</b> to get the raw html retrieved.
<a href="#"> json_restrictror</a>	Optional	Parameter defines the fields you want to restrict in the outputs for smaller, faster responses. See <a href="#">JSON Restrictor</a> for more details.

## API Results

## JSON Results

JSON output includes structured data for **organic results**, **ads**, **knowledge graph**, **news results**, **inline images**, **inline videos**, **related searches**, and more.

A search status is accessible through **search\_metadata.status**. It flows this way: **Processing** -> **Success** || **Error**. If a search has failed, **error** will contain an error message. **search\_metadata.id** is the search ID inside SerpApi.

## HTML Results

This API does not have html response, just a text. **search\_metadata.pretty\_html\_file** contains prettified version of result. It is displayed in playground.

## Example results for : apple

The screenshot shows the DuckDuckGo search results for the query "apple". The search bar at the top has "apple inc." in the search field and "apple" in the query field. Below the search bar, there are navigation links for "All", "Images", "Videos", "News", "Maps", and "Meanings". A dropdown menu shows "US (English)" selected, along with "Safe search: moderate" and "Any time". The main content area starts with a snippet from CDW.com about Apple products. Below this is a "Recent News" section with links to Bloomberg and Forbes. To the right of the news is a detailed "Apple Inc." profile. This profile includes sections for "Formerly Called", "Type Public", "Traded As", "Founders", "Number Of Locations", "Area Served", "Key People", "Revenue", "Operating Income", "Total Assets", "Total Equity", and "Subsidiaries". At the bottom of the profile are social media links for Wikipedia, Diffbot profile, Twitter profile, Instagram profile, and Facebook profile.

## ↔ GET

```
1 | https://serpapi.com/search.json?
engine=duckduckgo&q=apple&kl=us-en
```

## ↔ Code to integrate

```
1 | require "serpapi"
2 |
3 | client = SerpApi::Client.new(
4 |   engine: "duckduckgo",
5 |   q: "apple",
6 |   kl: "us-en",
7 |   api_key:
8 |     "a85853e3401522bd0dbb7b0d6b4901dc8a5849baae4354be6cea1dd229296958"
9 |
10|   results = client.search
11|   organic_results = results[:organic_results]
```
