e eBay Search Engine Results API

API uptime 99.999%

`/search?engine=ebay` API endpoint allows you to scrape the results from the eBay search engine via our SerpApi service. Head to the playground for a live and interactive demo.

</> GET

```
1  https://serpapi.com/search.json?engine=ebay&_nkw=Coffee&ebay_domain=ebay.com
```

</> Code to integrate

| cURL | **Ruby** | Python | JavaScript | Go | PHP | Java | Rust | .NET | Google Sheets |

```ruby
1  require "serpapi"
2
3  client = SerpApi::Client.new(
4    engine: "ebay",
5    _nkw: "Coffee",
6    ebay_domain: "ebay.com",
7    api_key: "a85853e3401522bd0dbb7b0d6b4901dc8a5849baae4354be6cea1dd229296958"
8  )
9
10 results = client.search
```

API Parameters

💬 Search Query

| `_nkw` | Required | Parameter defines the search query. You can use anything that you would use in a regular eBay search. |
| | | ⓘ `_nkw` parameter is optional when `category_id` parameter is specified. |

📍 Localization

| `ebay_domain` | Optional | Parameter defines the eBay domain to use. It defaults to `ebay.com`. Head to the eBay domains for a full list of supported eBay domains. |
| `_salic` | Optional | Parameter defines the location based on country. Head to the eBay location options for a full list of supported countries. |

`_pgn`   Optional   Parameter defines the page number. It's used for pagination. (e.g., `1` (default) is the first page of results, `2` is the 2nd page of results, `3` is the 3rd page of results, etc.).

`_ipg`   Optional   Parameter defines the maximum number of results to return. There are total of four options: `25`, `50` (default), `100` and `200` results.

🔽 Advanced Filters

`_blrs`   Optional   Parameter defines the exclusion of results from an auto-corrected query when the original query is spelled wrong. The recommended value for this parameter is `spell_auto_correct`. Omit `_blrs` if you want the search to include results for an auto-corrected query. Note that this parameter may not prevent eBay from returning results for an auto-corrected query if no other results are available.

`show_only`   Optional   Parameter defines the list of filters you can apply to the results. Available options **(case-sensitive)**:

- `Complete` - Completed items
- `Sold` - Sold items
- `FR` - Free returns
- `RPA` - Returns accepted
- `AS` - Authorized seller
- `Savings` - Deals and savings
- `SaleItems` - Sale items
- `Lots` - Listed as lots
- `Charity` - Benefits charity
- `AV` - Authenticity Guarantee
- `FS` - Free shipping
- `LPickup` - Local pickup

You can also combine multiple filter values by joining them with a comma (`value` + `,` + `value` ; eg: `Sold,FS`).

`buying_format`   Optional   Parameter defines the buying format you can apply to the results.

Available options **(case-sensitive)**:

- `Auction` - Auction
- `BIN` - Buy It Now
- `BO` - Accepts Offers

e Advanced Ebay Parameters

`_udlo`   Optional   Parameter defines the lowest price of items that should be included in the results (e.g. `10` will only return items that have higher price than `10`).

`_udhi`   Optional   Parameter defines the highest price of items that should be included in the results (e.g. `20` will only return items that have lower price than `20`).

`_sop`   Optional   Parameter defines results sorted by different options in the eBay. The default option is 'Best Match'. Head to the eBay sort options for a full list of supported sort options.

`_dmd`   Optional   Parameter defines the visual layout for displaying results. The available options are 'Grid' and 'List'.

`category_id`   Optional   Parameter defines the ID of a category where you want your search to be concentrated. ID values are accessible inside `categories` array, located in our JSON output (e.g. `categories[1].id`).

ℹ️ You can search using `category_id` parameter without specifying `_nkw` parameter.

`_stpos`   Optional   Parameter defines the ZIP or Postal code. You can use it to filter the shipping products by a selected area.

`LH_ItemCondition`   Optional   Parameter defines one or multiple product conditions to limit the search to. Condition is represented via numeric ID, e.g. `1000` for `New` . Multiple IDs should be joined with `|` delimiter, e.g. `1000|3000` . List of supported IDs can be found on eBay documentation page. There is also undocumented ID `10` for `Not Specified` condition.

`LH_PrefLoc`   Optional   Parameter defines the preferred location. The available options are 'Domestic', 'Regional', and 'Worldwide'.

🔷 Serpapi Parameters

`engine`   Required   Set parameter to `ebay` to use the Ebay API engine.

`no_cache`   Optional   Parameter will force SerpApi to fetch the Ebay results even if a cached version is already present. A cache is served only if the query and all parameters are exactly the same. Cache expires after 1h. Cached searches are free, and are not counted towards your searches per month. It can be set to `false` (default) to allow results from the cache, or `true` to disallow results from the cache. `no_cache` and `async` parameters should not be used together.

`async`   Optional   Parameter defines the way you want to submit your search to SerpApi. It can be set to `false` (default) to open an HTTP connection and keep it open until you got your search results, or `true` to just submit your search to SerpApi and retrieve them later. In this case, you'll need to use our Searches Archive API to retrieve your results. `async` and `no_cache` parameters should not be used together. `async` should not be used on accounts with Ludicrous Speed enabled.

`zero_trace`   Optional   Enterprise only. Parameter enables ZeroTrace mode. It can be set to `false` (default) or `true` . Enable this mode to skip storing search parameters, search files, and search metadata on our servers. This may make debugging more difficult.

structured `JSON` of the results, or `html` to get the raw html retrieved.

| `json_restrictor` | Optional | Parameter defines the fields you want to restrict in the outputs for smaller, faster responses. See JSON Restrictor for more details. |

API Results

JSON Results

JSON output includes structured data for organic results and more.

A search status is accessible through `search_metadata.status`. It flows this way: `Processing` -> `Success` || `Error`. If a search has failed, `error` will contain an error message. `search_metadata.id` is the search ID inside SerpApi.

HTML Results

HTML output is useful to debug JSON results or support features not supported yet by SerpApi.
HTML output gives you the raw HTML results from eBay.

API Examples

Example results for `_nkw` : `Coffee`

GET

```
https://serpapi.com/search.json?engine=ebay&_nkw=Coffee
```

Code to integrate   Ruby

```ruby
require "serpapi"

client = SerpApi::Client.new(
  engine: "ebay",
  _nkw: "Coffee",
  api_key:
"a85853e3401522bd0dbb7b0d6b4901dc8a5849baae4354be6cea1dd229296958"
)

results = client.search
organic_results = results[:organic_results]
```
