

Unlocker API

Send Your First Request with Bright Data's Web Unlocker API

[Copy page](#) ▾

A step-by-step guide to sending your first Web Unlocker API request with easy-to-follow code examples

Make your first request in minutes

Test the Unlocker API in minutes with these ready-to-use code examples.

Postman Example

Try Unlocker API in less than 1 minute >

Node.js Example

Try Unlocker API in less than 2 minutes >

Python Example

Try Unlocker API in less than 5 minutes >

Bright Data offers two methods for accessing Web Unlocker API, both delivering **identical** results while catering to different customer workflows:

Direct API access (recommended)

A pure REST API method for easy access and straightforward integration.

Native proxy-based access

For workflows that rely on proxy-based routing.

Direct API access (recommended)

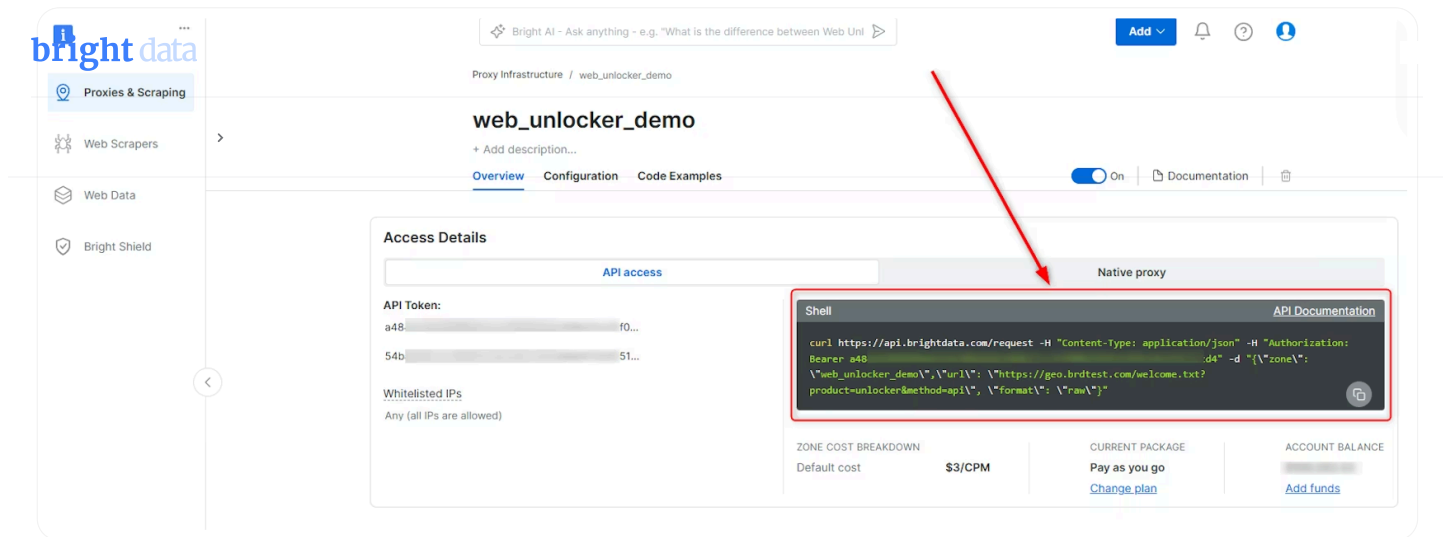

A simple and RESTful way to interact with Bright Data's Web Unlocker API. Direct API access abstracts proxy management and allows you to send requests via a central endpoint, ensuring ease of use and straightforward REST API integration.

Best for:

- Centralized endpoint: Access Web Unlocker API via a single, RESTful endpoint.
- Streamlined direct integration: Eliminating the complexity of managing proxies or routing.
- Single API key authentication: Secure and easy to use, replacing the need for username-password management.

Sending your first request

After [setting up](#) your Web Unlocker API zone, you'll find a working Web Unlocker API request example and your API key within your zone's **Overview** tab:

The following is an example of a simple Web Unlocker API cURL request:

Direct API access - cURL

```
curl -H "Content-Type: application/json" -H "Authorization: Bearer [INSERT_YOUR_API_KEY]" -d "{\"zone\": \"[INSERT_YOUR_ZONE_NAME]\", \"url\": \"[INSERT_YOUR_TARGET_URL]\", \"format\": \"raw\"}"
```

Request breakdown

1. API Endpoint: <https://api.brightdata.com/request>
2. Authorization Header: `Authorization: Bearer [INSERT YOUR API key]`

Your API key is found within your Web Unlocker API zone.

3. Payload:

zone : Your specific Web Unlocker API **zone name**.

url : The target URL you wish to access via Web Unlocker API.

format : Defines the response format. Use `raw` to receive the raw response from the target site.

[Optional] **body** : Specifies the raw POST payload sent to the target URL. e.g. `"body": "{\"key\": \"value\"}"`

Generating your Bright Data API key

A Bright Data API key is your secure authentication token for accessing Web Unlocker API via Direct API access. When adding a new Web Unlocker API zone in the [control panel](#), an API key will be generated automatically and can be found within the **Overview** tab of your zone.

Change plan

ACCOUNT BALANCE

Add funds

To generate a new API key:

Navigate to [Account settings](#).

Scroll down and click the Add API key button.

Follow the on-screen instructions to complete the process.

💡 We strongly recommend having an expiration date set on your API key for increased security.

⚠️ The API key will be shown to you on the screen **only** so make sure you copy and store it in a safe location per your organization's policies

Native proxy-based access

In order to access Web Unlocker, you will need to provide credentials which are comprised of:

1. Your customer ID
2. Your Web Unlocker API zone name
3. Your Web Unlocker API password
4. Bright Data SSL certificate

Customer ID

Customer ID can be found in the welcome email you received, or by clicking your account initial letter on the top right screen of your control panel, or by clicking here: [Account settings](#).

Zone name and password

Your zone name and password can be found in the overview tab of your unlocker zone in the control panel.

Bright Data SSL Certificate

⚠️ Prevent SSL errors by setting up Bright Data SSL certificate

SSL Certificate can be found by clicking "SSL certificate" wizard on your zone's overview top menu. See further instructions here: [SSL certificate](#).

Alternatively, you can [ignore SSL errors](#).
