

Unlocker API

Introduction to Bright Data's Unlocker API

 Copy page 

See how Bright Data's Unlocker API simplifies data collection with intelligent proxy management, avoiding blocks while delivering clean HTML/JSON responses

Unlocker API is part of our [unlocker scraping suite](#) and is designed to help you focus on your data collection while we take care of the full proxy and unblocking infrastructure for you.

You send a single API request with the target website and we'll return to you a clean `HTML` / `JSON` back. It's that simple!

Behind the scenes, our Unlocker API's intelligent algorithm seamlessly manages the dynamic process of finding the optimal proxy network, customizing headers, fingerprinting, CAPTCHAs, and more.

Best for

Scraping data from any website without getting blocked

Emulating real-user web behavior to "unlock" websites that use sophisticated detection methods

Teams that don't have a scalable proxy & unblocking infrastructure in-house

Paying only for successful requests

 Unlocker API is not made for [use on browsers](#) or 3rd party tools like [Adspower](#), [Puppeteer](#), [Playwright](#), or [Multilogin \(MLA\)](#). If you need a solution that interacts with a browser and uses tools like this, check out our [Browser API](#), or review our [other web data products](#) that can give you complete data sets.

 If you are looking for an unlocking solution specifically for **search engines**, check out our [SERP API](#)

Did you know?

On Unlocker API and [SERP API](#), you only pay for successful requests to your target domain—ensuring you get maximum value for every API interaction!
